PROFESSIONAL SUMMARY

Results-driven Software Developer with 2+ years of experience designing and deploying scalable REST APIs, ERP/CRM platforms, and real-time streaming solutions. Proficient in Python, Django, Django REST Framework, PostgreSQL, Celery, WebSocket, and AWS EC2. Delivered 10+ production-grade applications with CI/CD pipelines, PWA architecture, and payment gateway integrations (Razorpay, Stripe). Strong foundation across the full software development lifecycle with hands-on experience in cloud infrastructure, agile collaboration, and performance optimization.

TECHNICAL SKILLS

Languages: Python

Frameworks & Libraries: Django, Django REST Framework (DRF), Flask, Celery

Databases & Caching: PostgreSQL, Redis

Cloud & DevOps: AWS EC2, Linux, Nginx, Gunicorn, CI/CD Pipelines, Git, GitHub

APIs & Integrations: RESTful APIs, JWT Authentication, OAuth 2.0, Razorpay, Stripe, Third-Party APIs

Frontend Technologies: HTML, CSS, Bootstrap, Tailwind CSS, Tabler UI, Unpoly, AJAX, Chart.js

Specialized Tools: WebSocket, PWA (Progressive Web Apps), WeasyPrint, ReportLab

Development Tools: PyCharm, VS Code

PROFESSIONAL EXPERIENCE

Software Developer — *Aquevix Solutions Pvt. Ltd., New Delhi, India*

Apr 2024 – Apr 2026

- Architected and developed backend infrastructure for *The News Junkie*, a streaming platform supporting video/audio content, live podcasts, and subscription management using Django REST Framework
- Built secure RESTful APIs with JWT authentication and role-based access control (RBAC) for multi-platform content delivery across web and mobile clients
- Optimized PostgreSQL database performance through indexing strategies, query optimization, and efficient schema design, improving media file retrieval speed
- Designed and implemented backend modules for *Kuber WMS* including inventory management, order tracking, returns processing, and a multivendor architecture
- Integrated Celery with Redis to handle asynchronous background tasks, scheduled jobs, and real-time notifications at scale
- Deployed and configured applications on AWS EC2 with Nginx and Gunicorn, ensuring high availability, horizontal scalability, and zero-downtime releases
- Collaborated with frontend engineers using Bootstrap, Tabler UI, and Unpoly to deliver performant, responsive user interfaces

Tech Stack: Python, Django, Django REST Framework, PostgreSQL, Celery, Redis, AWS EC2, Bootstrap, Tabler UI, GitHub

Freelance Software Developer — *Remote*

2023 – 2024

UPVC Club – ERP & CRM Platform (upvcclub.com)

2024

- Developed a full-featured ERP and CRM platform for the UPVC window and door fabrication industry, streamlining end-to-end business operations including quoting, billing, and inventory
- Designed a Smart Quotation Engine with automated area-based pricing logic (Width × Height) and dynamic cost adjustment for accurate, real-time client estimates
- Implemented a GST-compliant billing system managing multi-stage invoice statuses (Paid, Partial, Overdue) with professional PDF generation via WeasyPrint
- Architected the platform as a Progressive Web App (PWA) enabling offline data access and mobile performance for on-site fabrication teams

- Secured the application with custom RBAC separating administrative management and customer-facing portals
Tech Stack: Python, Django, PostgreSQL, Tailwind CSS, WeasyPrint, PWA

Espere – Expense & Group Settlement App (espere.in)

2024

- Engineered a Virtual Ledger Engine using a double-entry-inspired system to manage complex multi-user debt relationships with atomic transaction integrity
- Implemented a greedy debt-simplification algorithm reducing N-way debt paths to minimal transaction sequences, improving the peer-to-peer settlement experience
- Built a Universal Multi-Split Engine supporting Equal, Percentage, and Exact share modes with automatic rounding correction for zero-sum balance integrity
- Architected an offline-first PWA core with service-worker-driven caching for instant mobile access in low-connectivity environments
- Developed a GST-ready reporting module generating high-fidelity PDFs and CSV exports with category-wise spending analytics using ReportLab and Chart.js
Tech Stack: Python, Django, PostgreSQL, Tailwind CSS, ReportLab, Chart.js, PWA

Taj Mahal Tours Packages (tajmahaltourspackages.com)

2023 – 2024

- Built and deployed a full-featured travel booking platform with Django backend, PostgreSQL database, and Razorpay payment gateway integration
- Implemented booking management, tour package administration, and customer dashboard; deployed via automated CI/CD pipeline on AWS EC2
Tech Stack: Python, Django, PostgreSQL, AWS EC2, Razorpay

KEY PROJECTS

AI English Teacher – Intelligent voice-interactive English learning platform powered by Google Gemini AI, featuring real-time speech recognition, pronunciation assessment, and adaptive feedback for language learners.

Django Sync Package (PyPI) – Open-source Python package providing database synchronization utilities for Django applications, accumulating 500+ downloads from the developer community.

EDUCATION

Bachelor of Science in Computer Science

2021

Mahatma Jyotiba Phule Rohilkhand University (MJPRU)

ACHIEVEMENTS & HIGHLIGHTS

- Published open-source Django Sync package on PyPI with **500+ community downloads**
- Deployed **10+ production applications** on AWS EC2 with zero-downtime releases and optimized server configurations
- Integrated **Razorpay and Stripe** payment gateways across multiple e-commerce and booking platforms
- Designed real-time systems handling **100+ concurrent WebSocket connections** using Redis-backed channels
- Shipped multiple **PWA platforms with offline-first architecture** serving field teams in low-connectivity environments
